MARY AUSTIN

The places where America first fell in love with “nature”—the Hudson River Valley, Niagara Falls—were in the moist East. Even when the West came into view, our first affections were for relatively lush locales, like Yellowstone and the Yosemite Valley. Mary Austin (1868–1934) was among the first to write with careful attention about the desert, and to do so in a way that managed to capture its beauty without indulging in undue sentimentality (in a sense, she’s the ancestor of Ed Abbey, another unblinking desert rat). In the 1880s, after graduating from college, Austin homesteaded a piece of California land with her mother and her brother. Her life was not easy—a luckless marriage, a mentally retarded daughter, a brush with breast cancer—but the reception of *The Land of Little Rain* (1903) was strong enough to let her write steadily for the rest of her life, usually on Southwestern themes. She was an unflinching observer, as in her description of a pair of meadowlarks caught by a early heat wave and trying to keep their egg shaded: “at midday they stood, or drooped above it, half fainting with pitifully parted bills, between their treasure and the sun.” Austin was tough, but also deeply human, and eventually she rigged a canvas screen to cast a shadow on the nest.

The Scavengers

Fifty-seven buzzards, one on each of fifty-seven fence posts at the rancho El Tejon, on a mirage-breeding September morning, sat solemnly while the white tilted travelers’ vans lumbered down the Canada de los Uvas. After three hours they had only clapped their wings, or exchanged posts. The season’s end in the vast dim valley of the San Joaquin is palpitatingly hot, and the air breathes like cotton wool. Through it all the buzzards sit on the fences and low hummocks,

with wings spread fanwise for air. There is no end to them, and they smell to heaven. Their heads droop, and all their communication is a rare, horrid croak.

The increase of wild creatures is in proportion to the things they feed upon: the more carrion the more buzzards. The end of the third successive dry year bred them beyond belief. The first year quail mated sparingly; the second year the wild oats matured no seed; the third, cattle died in their tracks with their heads towards the stopped water-courses. And that year the scavengers were as black as the plague all across the mesa and up the treeless, tumbled hills. On clear days they betook themselves to the upper air, where they hung motionless for hours. That year there were vultures among them, distinguished by the white patches under the wings. All their offensiveness notwithstanding, they have a stately flight. They must also have what pass for good qualities among themselves, for they are social, not to say clannish.

It is a very squalid tragedy,—that of the dying brutes and the scavenger birds. Death by starvation is slow. The heavy-headed, rack-boned cattle totter in the fruitless trails; they stand for long, patient intervals; they lie down and do not rise. There is fear in their eyes when they are first stricken, but afterward only intolerable weariness. I suppose the dumb creatures know nearly as much of death as do their betters, who have only the more imagination. Their even-breathing submission after the first agony is their tribute to its inevitableness. It needs a nice discrimination to say which of the basket-ribbed cattle is likeliest to afford the next meal, but the scavengers make few mistakes. One stoops to the quarry and the flock follows.

Cattle once down may be days in dying. They stretch out their necks along the ground, and roll up their slow eyes at longer intervals. The buzzards have all the time, and no beak is dropped or talon struck until the breath is wholly passed. It is doubtless the economy of nature to have the scavengers by to clean up the carrion, but a wolf at the throat would be a shorter agony than the long stalking and sometime perchings of these loathsome watchers. Suppose now it were a man in this long-drawn, hungrily spied upon distress! When Timmie O'Shea was lost on Armogossa Flats for three days without water, Long Tom

Basset found him, not by any trail, but by making straight away for the points where he saw buzzards stooping. He could hear the beat of their wings, Tom said, and trod on their shadows, but O'Shea was past recalling what he thought about things after the second day. My friend Ewan told me, among other things, when he came back from San Juan Hill, that not all the carnage of battle turned his bowels as the sight of slant black wings rising flockwise before the burial squad.

There are three kinds of noises buzzards make,—it is impossible to call them notes,—raucous and elemental. There is a short croak of alarm, and the same syllable in a modified tone to serve all the purposes of ordinary conversation. The old birds make a kind of throaty chuckling to their young, but if they have any love song I have not heard it. The young yawp in the nest a little, with more breath than noise. It is seldom one finds a buzzard's nest, seldom that grown-ups find a nest of any sort; it is only children to whom these things happen by right. But by making a business of it one may come upon them in wide, quiet cañons, or on the lookouts of lonely, table-topped mountains, three or four together, in the tops of stubby trees or on rotten cliffs well open to the sky.

It is probable that the buzzard is gregarious, but it seems unlikely from the small number of young noted at any time that every female incubates each year. The young birds are easily distinguished by their size when feeding, and high up in air by the worn primaries of the older birds. It is when the young go out of the nest on their first foraging that the parents, full of a crass and simple pride, make their indescribable chucklings of gobbling, gluttonous delight. The little ones would be amusing as they tug and tussle, if one could forget what it is they feed upon.

One never comes any nearer to the vulture's nest or nestlings than hearsay. They keep to the southerly Sierras, and are bold enough, it seems, to do killing on their own account when no carrion is at hand. They dog the shepherd from camp to camp, the hunter home from the hill, and will even carry away offal from under his hand.

The vulture merits respect for his bigness and for his bandit airs, but he is a sombre bird, with none of the buzzard's frank satisfaction in his offensiveness.

The least objectionable of the inland scavengers is the raven, frequenter of the desert ranges, the same called locally "carrion crow." He is handsomer and has such an air. He is nice in his habits and is said to have likable traits. A tame one in a Shoshone camp was the butt of much sport and enjoyed it. He could all but talk and was another with the children, but an arrant thief. The raven will eat most things that come his way,—eggs and young of ground-nesting birds, seeds even, lizards and grasshoppers, which he catches cleverly; and whatever he is about, let a coyote trot never so softly by, the raven flaps up and after; for whatever the coyote can pull down or nose out is meat also for the carrion crow.

And never a coyote comes out of his lair for killing, in the country of the carrion crows, but looks up first to see where they may be gathering. It is a sufficient occupation for a windy morning, on the lineless, level mesa, to watch the pair of them eying each other furtively, with a tolerable assumption of unconcern, but no doubt with a certain amount of good understanding about it. Once at Red Rock, in a year of green pasture, which is a bad time for the scavengers, we saw two buzzards, five ravens, and a coyote feeding on the same carrion, and only the coyote seemed ashamed of the company.

Probably we never fully credit the interdependence of wild creatures, and their cognizance of the affairs of their own kind. When the five coyotes that range the Tejon from Pasteria to Tunawai planned a relay race to bring down an antelope strayed from the band, beside myself to watch, an eagle swung down from Mt. Pinos, buzzards materialized out of invisible ether, and hawks came trooping like small boys to a street fight. Rabbits sat up in the chaparral and cocked their ears, feeling themselves quite safe for the once as the hunt swung near them. Nothing happens in the deep wood that the blue jays are not all agog to tell. The hawk follows the badger, the coyote the carrion crow, and from their aerial stations the buzzards watch each other. What would be worth knowing is how much of their neighbor's affairs the new generations learn for themselves, and how much they are taught of their elders.

So wide is the range of the scavengers that it is never safe to say, eyewitness to the contrary, that there are few or many in such a place.

Where the carrion is, there will the buzzards be gathered together, and in three days' journey you will not sight another one. The way up from Mojave to Red Butte is all desertness, affording no pasture and scarcely a rill of water. In a year of little rain in the south, flocks and herds were driven to the number of thousands along this road to the perennial pastures of the high ranges. It is a long, slow trail, ankle deep in bitter dust that gets up in the slow wind and moves along the backs of the crawling cattle. In the worst of times one in three will pine and fall out by the way. In the defiles of Red Rock, the sheep piled up a stinking lane; it was the sun smiting by day. To these shambles came buzzards, vultures, and coyotes from all the country round, so that on the Tejon, the Ceriso, and the Little Antelope there were not scavengers enough to keep the country clean. All that summer the dead mummified in the open or dropped slowly back to earth in the quagmires of the bitter springs. Meanwhile from Red Rock to Coyote Holes, and from Coyote Holes to Haiwai the scavengers gorged and gorged.

The coyote is not a scavenger by choice, preferring his own kill, but being on the whole a lazy dog, is apt to fall into carrion eating because it is easier. The red fox and bobcat, a little pressed by hunger, will eat of any other animal's kill, but will not ordinarily touch what dies of itself, and are exceedingly shy of food that has been manhandled.

Very clean and handsome, quite belying his relationship in appearance, is Clark's crow, that scavenger and plunderer of mountain camps. It is permissible to call him by his common name, "Camp Robber:" he has earned it. Not content with refuse, he pecks open meal sacks, filches whole potatoes, is a gormand for bacon, drills holes in packing cases, and is daunted by nothing short of tin. All the while he does not neglect to vituperate the chipmunks and sparrows that whisk off crumbs of comfort from under the camper's feet. The Camp Robber's gray coat, black and white barred wings, and slender bill, with certain tricks of perching, accuse him of attempts to pass himself off among woodpeckers; but his behavior is all crow. He frequents the higher pine belts, and has a noisy strident call like a jay's, and how clean he and the frisk-tailed chipmunks keep the camp! No crumb or paring or bit of eggshell goes amiss.

High as the camp may be, so it is not above timber-line, it is not too high for the coyote, the bobcat, or the wolf. It is the complaint of the ordinary camper that the woods are too still, depleted of wild life. But what dead body of wild thing, or neglected game untouched by its kind, do you find? And put out offal away from camp over night, and look next day at the foot tracks where it lay.

Man is a great blunderer going about in the woods, and there is no other except the bear makes so much noise. Being so well warned beforehand, it is a very stupid animal, or a very bold one, that cannot keep safely hid. The cunningest hunter is hunted in turn, and what he leaves of his kill is meat for some other. That is the economy of nature, but with it all there is not sufficient account taken of the works of man. There is no scavenger that eats tin cans, and no wild thing leaves a like disfigurement on the forest floor.
